Rochester Studies in Medical History

The University of Rochester Press is pleased to announce the launching of a new series: Rochester Studies in Medical History (RSMH). With a number of medical history titles already in print the UR Press is prepared to see RSMH become a major endeavor. The focus of the series is the history of public health, defined to include the history of measures taken to protect the health of populations by organized community effort, administrative and regulatory agencies, and political and social mobilization.

THE CLINICAL CONSULTATIONS OF FRANCESCO TORTI

by Saul Jarcho

Orig. Ed. 2000 944 pp.

ISBN 1-57524-144-7 \$125.00

In every century, certain men stand out because of their accomplishments and their attention to detail in a specialized field. Such a man is Dr. Saul Jarcho. Interested in history from an early age, Dr. Jarcho has de-

voted his efforts to the History of Medicine Association and as a Fellow of The New York Academy of Medicine. Because of Dr. Jarcho's illustrious background and specialized knowledge, The New York Academy of Medicine has joined with Krieger Publishing Company to publish his complete investigative history of Francesco Torti, best known for his 1712 book, published in Italy, which discussed the use of cinchona bark to cure malaria. Torti gathered together over 300 consultation letters to patients who themselves had written for diagnosis and therapeutic advice after describing their symptoms. These reports were not published in the original 1712 edition much less in an English translation. Now, thanks to Dr. Jarcho's skill and experience as a clinical historian and translator, these unique records of the medical practices of the leading Italian clinician of the first half of the 18th century are available for historians and physicians in the 21st century.
